

The Complete Project Integration Tool.

The Viewpoint V6 Software Project Management module delivers PMs the tool they need to deliver on-time and profitable jobs. The PM module tracks all project activities, costs and revenues while seamlessly integrating with accounting. Change orders, subcontracts, and purchase orders, as well as complete document tracking including submittals, RFIs, transmittals, daily logs, project meetings, punch lists, and other documents are all tracked in the intuitive state-of-the-art user interface. In addition, the project management workflows make extensive use of other Viewpoint modules for information regarding subcontractors, suppliers, vendors, materials, crews, equipment, personnel, and phases.

EVERYTHING YOU NEED TO MANAGE PROJECTS FOR GREATER PROFITABILITY.

Create Projects to succeed from the start

The PM Import programs allow you to upload estimating data into Project Management from a variety of leading third-party estimating software packages. Once imported, the project data can be edited or modified as needed prior to releasing to accounting; updates include estimates, contracts for billing and commitments. Buy-out of purchase orders and subcontracts can be done as commitments are made.

Accounting/PM Integration: Manage more effectively

Viewpoint V6 Software's integrated architecture allows your project management and accounting groups to work together. Project subcontracts, purchase orders, contracts and change orders approved in the PM module update the Accounting and Job Cost modules automatically, delivering exact information while reducing duplicate entry and eliminating errors. The common reporting structure employed by Viewpoint V6 Software provides your PMs with the information they need to see the full picture of their jobs and manage more effectively.

Track Documents Quickly and Securely

Viewpoint V6 Software Document Management system indexes and stores all critical documents related to the job. In addition to the regular construction documents, project managers can drag and drop emails, pictures, and more into project files to securely store all information that might be needed later. All of these documents can be quickly retrieved and viewed with Viewpoint V6 Software's easy-to-use Thumbnail Viewer.

Collaborate in Real Time

Viewpoint V6 Software Connects is a web-based, collaborative tool for sharing project-specific information with team members inside and outside your organization. It allows easy setup of secured project websites, where team members can view and respond to RFIs, documents, images and other job-related information. Connects enables greater collaboration, reducing wasted time and ensuring that projects meet time and budget requirements. Receive email notification on project notes, and track and manage outstanding project note reviews.

Functional Benefits:

- Comprehensive tool to manage your projects
- Integrated system streamlines information flow
- Flexible software to adapt to the way you do business
- Reduce time searching/retrieving documents
- Reduce project communication turnaround time
