

# Viewpoint Construction Software doubles user growth according to 2010 Technology Survey

**June 17, 2010, Portland, OR-** Viewpoint Construction Software doubled user growth of its functionality-rich Viewpoint V6 Software® according to the results of the 2010 CFMA Technology Survey\*. The highly regarded survey provides detailed statistics and trends in the competitive construction software technology sector.

With the number of survey respondents currently using V6 in 2010 vs. 2008 more than doubling, Viewpoint Construction Software's CEO, Jay Haladay attributes the growth to a number of industry factors. "I think contractors are using these slower economic times to refine processes and increase efficiencies in their organizations, and V6 offers the integrated feature set to address those needs." He added, "Contractors are simply seeking modern technology to reduce the number of 'off system' spreadsheets and are demanding project management capabilities that seamlessly integrate with accounting, job cost, and payroll."

In fact, based on the survey, Viewpoint V6 Software adoption is one of the fastest growing integrated accounting, job cost, payroll and project management solutions available. Contributing to this news is the fact that in this year's survey, 27% of Heavy Highway contractors reported that V6 was their software of choice, making it the most widely used software in that construction segment according to the survey. Additionally, V6 experienced one of the fastest usage growth rates among General Contractor respondents for any provider on the survey.

Another factor keeping V6 on a steady rise is the number of respondents who have indicated a growing need to dedicate more personnel to the HR Management function. Viewpoint Construction Software anticipated this need and contributed time and resources to developing an integrated HR solution for V6 that addresses all the unique requirements of HR professionals.

"We are extremely pleased with our 2010 survey results and plan to continue our year-over-year growth of loyal V6 users among all types of contractors by leveraging our industry knowledge with a keen sense of what will be needed tomorrow," explained Haladay. "We look forward to continued collaboration with our customers to further develop the next level of integrated construction software."

## About Viewpoint Construction Software:

With a long-standing focus on meeting the information needs of mid to large-scale organizations, Viewpoint has achieved a leadership position in construction enterprise software. Built on a contemporary and scalable Microsoft .Net platform, the firm provides construction-specific solutions that address the unique needs of leading firms throughout the U.S., Canada and Australia.

Viewpoint is happy to announce their partnership with Cornerstone Solutions, an Oak Brook, IL based technology provider to the construction industry. Cornerstone Solutions has been the Midwest's premier solution provider to construction and real estate firms of all sizes since 1985. They continue to be recognized as a "Top Solution Provider" serving over 1,000 leading Illinois, Indiana, Wisconsin, and Michigan construction, service, and real estate companies. "Cornerstone Solutions is thrilled to add Viewpoint Construction Software to our line-up of products," said Dom Pernai, Cornerstone President. "This product is a proven winner and is quickly becoming the industry standard solution."
