

Wireless Scheduling

for the Production Workflow Management Suite

This remote application allows a builder to update a scheduled activity, approve purchase orders, manage variances, maintain quality control walk-throughs, initiate vendor notifications and send text and email message to suppliers.

wireless scheduling

When a builder improves the communication between the home office and the job site it is proven that they become more efficient while lowering overhead costs. Additionally, builders that combine improved procedures between the field, suppliers/trades and the home office with current technology solutions are more profitable. However, not all technologies are the same. BuilderMT has developed Wireless Scheduling that does both: improve workflow processes and integrate state-of-the-art technology. Using Wireless Scheduling, the project superintendent can now be in constant communication with the home office and the supply chain.

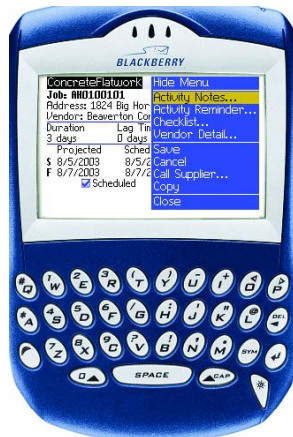

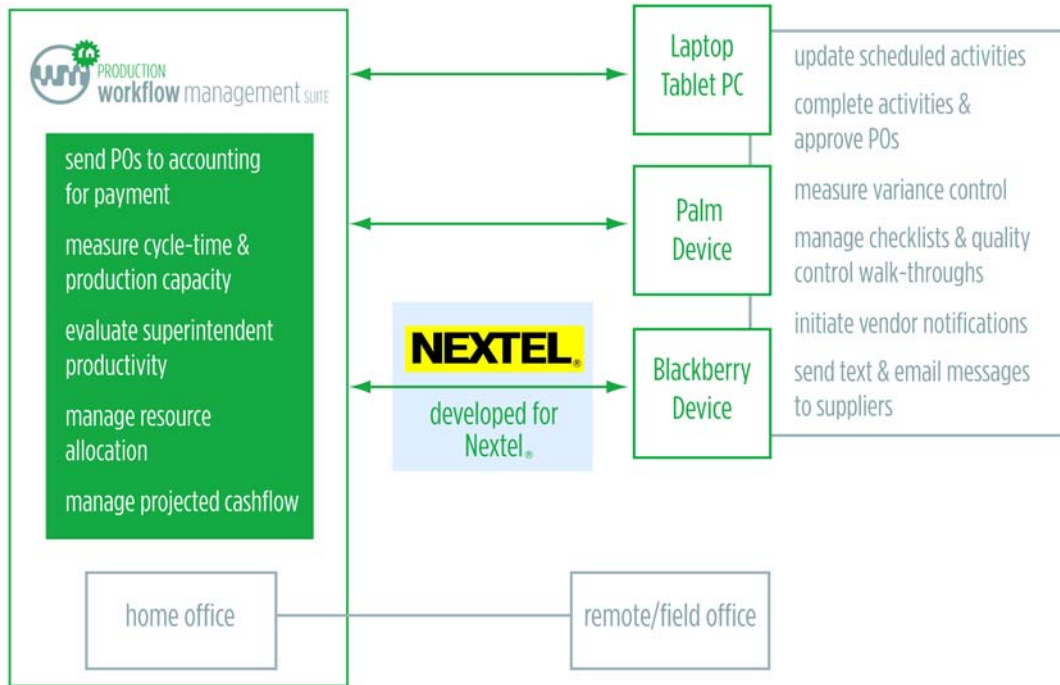

Features

- Manage and track schedule changes.
- Track and measure variance control.
- Keep in contact with others using notes and reminders.
- Communicate with trade or suppliers by phone, Direct Connect™ radio, text messaging and e-mail.
- Manage and complete activity checklists and quality control walks-throughs.

Through the use of Blackberry and Palm® OS handheld devices, Wireless Scheduling enables you to keep on track with the project. Improved communications with trades and suppliers lowers the cycle time of a project. With the integration to Timberline® Office or the complete integrated, Timberline Production Management, the builder has the ability to:

- Manage cash flow.
- Project home closings more accurately.
- Approve purchase orders for payment.
- Auto send vendor notifications via print, fax or e-mail.
- Provide up-to-date status of a given activity or task.
- Enter reminders and notes.
- Define variance codes for determining delays in schedules.
- Effectively manage trade resources.

WIRELESS SCHEDULING WORKFLOW MAP

Use handheld devices to enter variance codes as well as start and finish dates for scheduled and actual. Actual dates entered will trigger updates to the schedule and auto-select associated POs as ready for payment.
